Pan Am Dragon Boat Replacement Bench Kits are manufactured to meet or exceed OEM parts. Only 1088 certified marine plywood is used. Each finished bench is saturated with epoxy sealer and receives 3 coats of marine spar varnish. Each bench in every boat is unique with respect to the long & short edge width. This is why we need you to complete the table above... to achieve a perfect fit for each bench in your boat. To replace your benches, remove the old ones and replace one at a time and use as templates to drill clearance holes for the mounting screws in the correct location on your new benches. If you need new screws, please be sure to ask our advice on purchasing these with your replacement benches so that they can be included in the packaging. In addition to screws, use a small amount of marine adhesive to secure the new benches. We recommend 3M 5200. To care for your benches, inspect them every so often to ensure that the varnish coatings are intact. To apply additional varnish, simply scuff the surfaces with a scotch cloth and apply multiple thin coats with a foam brush. We recommend using the same brand of varnish as the original coating; Minwax Helmsman Spar Urethane available in quart and gallon sizes at Home Depot. Take care of your benches and you won't ever need this form again!!
